

2021 ASWC Guide to COVID Testing

*Our office recommends the community testing sites sponsored by Tarrant County. Tests are free and there is no Tarrant County residency requirement. There will also be Spanish speaking staff available on site. Results will be sent via email, text or a phone call and results should be received within 72-96 hours. These locations are denoted with ***

Key to COVID Test Types :

- For symptomatic patients or those exposed to COVID, diagnostic tests include **molecular tests** like rapid testing nasal PCR tests which detect the viruses genetic material and **antigen tests** that detect specific proteins from the virus. Results usually return within usually 3-5 days
- For patients looking to determine immunity and past exposure to COVID-19, **antibody tests** will look for specific antibodies made by your immune system in response to a threat, such as a specific virus. This test will usually be a finger stick or blood draw and results will return either the same day or in 1-3 days
